

Kalinga — Design System, v2

Health-tracking app · derived from the Figma mockup (Login, Register, Dashboard, Daily Log, Overview, Profile)

A. Palette — as a ColorScheme

Revised from the prelim: the prelim had `Surface = #06202B` (near-black navy) and `Text on background = #7AE2CF` (light mint) — swapped roles that don't match the mockup (cards are white, not dark) and would fail contrast (mint on cream $\approx 1.3:1$, far under the $4.5:1$ minimum). Fixed below: surfaces are white, and body text reuses the dark primary green, which checks out at $\sim 12:1$ on both background and surface.

 Primary #1A312C App bar (Daily Log / Overview / Profile / Register-back), primary buttons (Login, Create Account), active nav icon	 onPrimary #FFFFFF "Kalinga" logo text, button labels on the green app bar / buttons	 Secondary #428475 Wellness score % text, "↑5% from yesterday", weekly chart line, outlined Register button, completed-chip color	 Background #FFF4E1 Screen background on every screen
 Surface #FFFFFF Wellness Score card, Weekly Chart card, Daily Summary card, Suggestion cards, Profile info card, text-field fill	 onSurface / Text #1A312C Body text on cream or white — form labels, card copy, list rows	 Error #FF0052 Password-mismatch on Register, "not recognized as food" from Gemini validation	
 Body text (#1A312C) on Background (#FFF4E1) — $\sim 12:1$ contrast. Passes $4.5:1$ easily.		 Body text (#1A312C) on Surface (#FFFFFF) — $\sim 15:1$ contrast. Passes $4.5:1$ easily.	

Dark mode: light only, decided now. The mockup was designed entirely as a warm cream/green light palette with no dark-surface equivalents. Building a second scheme now would mean guessing colors with no mockup to check them against. Decision: light only for this term — enforced by never hardcoding a color outside `theme.dart`.

```
final scheme = ColorScheme.fromSeed(  
  seedColor: const Color(0xFF1A312C), // primary  
  brightness: Brightness.light,  
)  
.copyWith(  
  secondary: const Color(0xFF428475),  
  error: const Color(0xFFFF0052),  
  surface: const Color(0xFFFFFFFF),  
)  
// Background is applied via scaffoldBackgroundColor: const Color(0xFFFFF4E1)
```

B. Type scale — as a TextTheme

Four styles (the worksheet allows 3–4) because the mockup has a clearly distinct section-header pattern — "Today's Progress", "Weekly Summary", "Goals" — that's bolder than body text but smaller than a screen title.

Heading
headlineSmall · 24 / Bold

Daily Log

Section Title
titleMedium · 18 / SemiBold

Today's Progress

Body
bodyMedium · 16 / Regular

You had a balanced day overall.

Caption
labelSmall · 12 / Regular

↑ 5% from yesterday

STYLE	FLUTTER SLOT	SIZE	WEIGHT	USED FOR
Heading	headlineSmall	24	Bold (700)	App-bar titles ("Daily Log", "Overview", "Profile"), "Kalinga" logotype on Login/Register
Section Title	titleMedium	18	SemiBold (600)	"Today's Progress", "Weekly Chart Sleep", "Daily Summary", "Weekly Summary", "Suggestion", "Goals"
Body	bodyMedium	16	Regular (400)	Form input text, meal/beverage rows, Daily Summary paragraph
Caption	labelSmall	12	Regular (400)	Field hints ("Enter your username"), timestamps, small stats ("Sleep · 7h 40m", "↑5%")

```
textTheme: const TextTheme(  
  headlineSmall: TextStyle(fontSize: 24, fontWeight: FontWeight.bold),  
  titleMedium:   TextStyle(fontSize: 18, fontWeight: FontWeight.w600),  
  bodyMedium:   TextStyle(fontSize: 16),  
  labelSmall:   TextStyle(fontSize: 12, color: Colors.grey),  
)
```

C. Spacing — as constants

Base unit: **8px**. Dotted lines mark the actual gap width at real scale.

xs — 4px. Gap between an icon and its label inside a chip (e.g. 🍌 + "Sleep — 7h 30m")

sm — 8px. Gap between stacked list rows (Breakfast/Lunch/Dinner; suggestion cards)

md — 16px. Card internal padding; gap between major blocks (Wellness Score → Today's Progress → Weekly Chart)

lg — 24px. Screen edge padding (left/right margin on every screen)

```
class AppSpacing {  
  static const double xs = 4;
```

```
static const double sm = 8;  
static const double md = 16;  
static const double lg = 24;  
}
```

D. Reusable components

Every piece below appears on 2+ screens in the mockup, or repeats multiple times within one screen. Sketches are schematic, not pixel-accurate — they show shape and structure only.

PrimaryButton

File: lib/widgets/primary_button.dart
Params: String label, VoidCallback? onPressed
Appears on: Login ("Login"), Register ("Create Account")

AppTextField

File: lib/widgets/app_text_field.dart
Params: String label, String hint, bool obscureText, TextEditingController controller, String? Function(String?)? validator
Appears on: Login, Register (7 fields), Profile (edit mode)

AppBottomNavBar

File: lib/widgets/app_bottom_nav_bar.dart
Params: int currentIndex, ValueChanged<int> onTap
Appears on: Dashboard, Daily Log, Overview, Profile (identical on all four)

SectionCard

File: lib/widgets/section_card.dart
Params: Widget child, EdgeInsets? padding
Appears on: Dashboard (Wellness Score, Weekly Chart, Quick Insight), Overview (Daily/Weekly Summary, Suggestions), Profile (info box, Goals)

ProgressChip

File: lib/widgets/progress_chip.dart
Params: IconData icon, String label, bool completed
Appears on: Dashboard — Today's Progress (Sleep, Meals, Water, Activity — 4 instances)

SuggestionTile

File: lib/widgets/suggestion_tile.dart
Params: String emoji, String title, String description
Appears on: Dashboard (Quick Insight, 1x), Overview (Suggestion list, 3x)

AddEntryRow

File: lib/widgets/add_entry_row.dart
Params: String label, bool isLogged, VoidCallback onTap
Appears on: Daily Log — Meal (Breakfast/Lunch/Dinner) and Beverage rows

StatRow

File: lib/widgets/stat_row.dart
Params: IconData icon, String label, String value
Appears on: Overview (Daily Summary breakdown), Profile (Age/Height/Weight, Goals)

AvatarPlaceholder

File: lib/widgets/avatar_placeholder.dart

Params: `double radius`, `String? imageUrl`

Appears on: Dashboard (app bar), Profile (header) — placeholder until image upload is built (stretch goal)

Kalinga — Design System v2. Sketches are schematic references for widget structure, not final pixel-perfect UI.

What changed, and why

ELEMENT	PRELIM SAID	NOW SAYS	WHY IT CHANGED
Surface / Text roles	Surface #06202B (dark navy), Text #7AE2CF (light mint)	Surface #FFFFFF, onSurface #1A312C	The prelim colors were assigned generically and never checked against the mockup or for contrast — mint-on-cream measures ~1.3:1, far below the 4.5:1 minimum, and every card in the actual mockup is light, not dark
"Used for" lines	Generic worksheet wording ("screen background", "body text")	Tied to specific mockup elements (app bar, Wellness Score card, ProgressChip, etc.)	Direct professor feedback: the prelim's "used for" column said nothing about this specific app beyond a stray "Quest List" mention left over from a template
Type scale	3 sizes (Heading/Body/Caption), not mapped to Flutter slots	4 sizes, mapped to headlineSmall / titleMedium / bodyMedium / labelSmall	Section headers ("Today's Progress", "Goals") are visually distinct from both the screen title and body text in the mockup — a 3-size scale flattened that difference
Components	3 generic rows ("Add Button", "Text Box", "Bottom Navigation Bar")	9 components with real file paths, constructor params, and exact screens/counts	Direct professor feedback: "the components section especially needs real, specific entries" — the old table wasn't buildable

E. Assembled theme (bonus)

```
// lib/theme.dart
import 'package:flutter/material.dart';

final appTheme = ThemeData(
  useMaterial3: true,
  scaffoldBackgroundColor: const Color(0xFFFFF4E1),
  colorScheme: ColorScheme.fromSeed(
    seedColor: const Color(0xFF1A312C),
    brightness: Brightness.light,
  ).copyWith(
    secondary: const Color(0xFF428475),
    error: const Color(0xFFFF0052),
    surface: const Color(0xFFFFFFFF),
  ),
  textTheme: const TextTheme(
    headlineSmall: TextStyle(fontSize: 24, fontWeight: FontWeight.bold),
    titleMedium: TextStyle(fontSize: 18, fontWeight: FontWeight.w600),
    bodyMedium: TextStyle(fontSize: 16),
    labelSmall: TextStyle(fontSize: 12, color: Colors.grey),
  ),
  cardTheme: const CardThemeData(
    margin: EdgeInsets.all(16),
    color: Color(0xFFFFFFFF),
  ),
  filledButtonTheme: FilledButtonThemeData(
    style: FilledButton.styleFrom(
      backgroundColor: const Color(0xFF1A312C),
      foregroundColor: Colors.white,
      minimumSize: const Size.fromHeight(48),
      shape: RoundedRectangleBorder(borderRadius: BorderRadius.circular(24)),
    ),
  ),
);
```
