

3. Design System, version 2

Step A: The palette, as a ColorScheme

Dark mode: light only, decided now. The mockup was designed entirely as a warm cream/green light palette with no dark-surface equivalents. Building a second scheme now would mean guessing colors with no mockup to check them against.

```
final scheme = ColorScheme.fromSeed(  
  seedColor: const Color(#91AE6E),    // your primary  
  brightness: Brightness.light,  
);
```

Step B: The type scale, as a TextTheme

Heading headlineSmall - 24/Bold	Daily Log
Section Title titleMedium - 18/SemiBold	Today’s Progress
Body bodyMedium - 16 / Regular	You had a balance day overall
Caption labelSmall - 12 / Regular	+ 5% from yesterday

STYLE	FLUTTER SLOT	SIZE	WEIGHT	USED FOR
Heading	headlineSmall	24	Bold (~700)	App-bar titles,
Section Title	titleMedium	18	SemiBold (~600)	“Today’s Progress”, “Weekly Chart Sleep”, etc
Body	bodyMedium	16	Regular (~400)	Form input text, meal/brevage rows, etc.
Caption	labelSmall	12	Regular (~400)	Field hints

```
TextTheme: const TextTheme(  
  headlineSmall: TextStyle(fontSize: 24, fontWeight: FontWeight.bold),  
  titleMedium: TextStyle(fontSize: 18, fontWeight: FontWeight.w600),  
  bodyMedium: TextStyle(fontSize: 16),  
  labelSmall: TextStyle(fontSize: 12, color: Colors.grey),  
),
```

Step C: Spacing, as constants

```
class AppSpacing {  
  static const double xs = 4;  
  static const double sm = 8;  
  static const double md = 16;  
  static const double lg = 24;  
}
```

xs - 4px. Gap between an icon and its label inside a chip

sm - 8px. Gap between stacked list rows.

md - 16px. Card internal padding: gap between major blocks.

lg - 24px. Screen edge padding

Step D: Components, as files

COMPONENT	FILE	CONSTRUCTOR PARAMETERS	APPEARS ON
	lib/widgets/primary_button.dart	String label, VoidCallback? onPressed	Login (Login), Register (Create Account)
	lib/widgets/app_text_field.dart	String label, String hint, bool obscureText, TextEditingController controller, String? Function(String?)? validator	Login, Register (7 fields), Profile (edit mode)
	lib/widgets/app_bottom_nav_bar.dart	Regular (~400)int currentIndex, ValueChanged<int> onTap	Dashboard, Daily Log, Overview, Profile
	lib/widgets/section_card.dart	IconData icon, String label, bool completed	Dashboard (Wellness Score, Weekly Chart, Quick Insight), Overview (Daily/Weekly Summary, Suggestions), Profile (info box, Goals)
	lib/widgets/progress_chip.dart	String emoji, String title, String description	Dashboard — Today's Progress (Sleep, Meals, Water, Activity — 4 instances)
	lib/widgets/suggestion_tile.dart	String label, bool isLogged, VoidCallback onTap	Dashboard (Quick Insight, 1x), Overview (Suggestion list, 3x)
	lib/widgets/add_entry_row.dart	IconData icon, String label, String value	Daily Log — Meal (Breakfast/Lunch/Dinner) and Beverage
	lib/widgets/stat_row.dart	double radius, String? imageUrl	Overview (Daily Summary breakdown), Profile (Age/Height/Weight, Goals)
	lib/widgets/avatar_placeholder.dart	double radius, String? imageUrl	Dashboard (app bar), Profile (header)

Step E: The theme file, assembled

What changed, and why

ELEMENT	PRELIM SAID	NOW SAYS	WHY IT CHANGED
Surface / Text roles	Surface = #06202B (near-black navy), Text (on background) = #7AE2CF (light mint)	Surface = #FFFFFF, onSurface/Text = #1A312C	The prelim assigned these generically without checking against the mockup or for contrast. Mint text on cream background measures far under the worksheet's minimum and every card in the actual Figma mockup (Wellness Score, Daily Summary, Suggestions) is light, not dark, so Surface needed to be white, not navy
Type scale	3 sizes (Heading 24/Bold, Body 16/Regular, Caption 12/Regular), not mapped to any Flutter TextTheme slot	4 sizes, each mapped to a named slot: headlineSmall (24/Bold), titleMedium (18/SemiBold — new), bodyMedium (16/Regular), labelSmall (12/Regular)	The mockup has a section-header pattern ("Today's Progress," "Weekly Summary," "Goals") that's visually bolder than body text but smaller than a screen title, the original 3-size scale had no slot for it, so it would've been flattened into either Heading or Body
